

Solar is "in" in Brooklyn, Ohio

Michael W. Wise | Tuesday, May 22, 2018

Believe it or not, an iconic solar project has commenced on a closed landfill in Brooklyn, Ohio, located in Cuyahoga County. Although not known as the greatest solar resource, Brooklyn is fortunate to have a creative and aggressive public power system, **Cleveland Public Power (CPP)**, as well as a county government that truly believes in sustainability. These attributes combined with a dynamic developer (**Enerlogics Solar**), helpful EPA and creative investor (Ohio-based **IGS Energy**), enabled this project to move forward.

Currently, CPP is constructing the new infrastructure and Conti Construction is deploying equipment on site. Enerlogics has installed a video camera at the site and a live feed is available at <http://enerlogics.com/portfolio/cuyahoga-urban-renewable-power-solar-project/#livecam1>.

To get up to speed on this important project, the following are recent articles of interest :

- 1) ["Dublin-based IGS to develop solar farm on former landfill near Cleveland"](#) (April 5, 2018)
- 2) ["IGS Solar to Begin Construction of Solar on Landfill Site in Ohio"](#) (April 5)

- 5) <https://www.bizjournals.com/columbus/news/2018/04/04/dublin-based-digs-to-develop-solar-farm-on-former.html>

It promises to be an exciting summer as this solar project is built and enters commercial operation.

Solar is in in Brooklyn Ohio

Additional projects are already being considered. Stay tuned!
